## Investment Style

Small Value

## Investment Objective and Strategy

The Fund seeks long-term capital growth by investing in stocks of smaller companies that the investment advisor to the Fund believes are undervalued yet poised to outperform. The Fund generally invests in companies with market capitalizations in the range of companies in the Russell 2000® Value Index. The management team believes that consistent, long-term performance can be achieved by investing in statistically cheap stocks the team believes are trading below their value, investing in companies with improving sentiment and continuously evaluating risk exposure.

## About the Fund

- Goal of capital appreciation.
- Small-Cap Value strategy.
- Focused on stocks with improving sentiment.

**Past performance does not guarantee future results. The performance quoted represents past performance and current performance may be lower or higher. The investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than the original cost. To obtain performance information current to the most recent month-end, visit [www.vcm.com](http://www.vcm.com).** Returns include reinvestment of dividends and capital gains. Performance for periods greater than one year is annualized. Fee waivers and/or expense reimbursements were in place for some or all periods shown, without which, fund performance would have been lower. High, double-digit returns are highly unusual and cannot be sustained. Investors should be aware that these returns were primarily achieved during favorable market conditions.

## MORNINGSTAR RATINGS AND RANKINGS

	Overall	3 Year	5 Year	10 Year
Morningstar Rating	★★★	★★★★	★★★	★★★
Morningstar Ranking (%)	—	32	35	43
# of Funds	457	457	426	335

Morningstar Category: Small Value. Morningstar ratings and rankings are based on the A share class.

The Morningstar Rating™ for funds, or “star rating,” is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The Morningstar Rating does not include any adjustment for sales loads. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable)

Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. The Morningstar percentile ranking is based on a fund's average annual total return (excluding sales charges) relative to all funds in the same category. The highest (most favorable) percentile rank is 1%, and the lowest (least favorable) percentile rank is 100%. Fund performance used for the rankings reflects certain fee waivers, without which, Morningstar rankings would have been lower and Morningstar ratings may have been lower.

**All investing involves risk, including the potential loss of principal.** In addition to the normal risks associated with investing, investments in smaller companies typically exhibit higher volatility. Investments concentrated in an industry or group of industries may face more risks and exhibit higher volatility than investments that are more broadly diversified over industries or sectors. Companies in the financial services sector are subject to extensive government regulation that may affect the scope of their activities, the prices they can charge and capital maintenance. The industry is subject to severe competition and can be significantly affected by market conditions, including interest rate changes. Investments in companies in the industrials sector may be adversely affected by changes in supply and demand for products and services, governmental regulation and changes spending policies, world events and economic conditions. International investments may involve risk of capital loss from unfavorable fluctuation in currency values, from differences in generally accepted accounting principles or from economic or political instability in other nations. The value of your investment is also subject to geopolitical risks such as wars, terrorism, environmental disasters, and public health crises; the risk of technology malfunctions or disruptions; and the responses to such events by governments and/or individual companies.

**Active Share** is a measure that compares the proportion of security holdings within the product against those of the respective benchmark. The value represents the percentage difference between fund and benchmark. **Market Capitalization** is the total dollar value of all

outstanding shares computed as number of shares times current market price. **Alpha** is the excess return of a fund relative to the return of a benchmark index. **Beta** is a measure of the volatility, or systematic risk, of a security or portfolio relative to the market or a benchmark. **R-squared** is a statistical measure that represents the percentage of a fund's or security's movements that can be explained by movements in a benchmark index. **Standard deviation** measures an investment's historical volatility, calculated using the investment's annual rate of return. **Portfolio Turnover Ratio - LTM** measures trading activity in a portfolio for the past year, indicating how often investments are bought and sold. **Average Price/Earnings (P/E) Ratio** is the current share price of a stock divided by its earnings per share.

**The Russell 2000® Value Index** is a market-capitalization-weighted index that measures the performance of those companies in the Russell 2000® Index with lower price-to-book ratios and lower forecasted growth values.
